

Coding Interview Invite

Software Engineering

We're excited to have you participate in our upcoming interview. During the interview you'll be working with one of our colleagues on a shared code base. The code can be accessed [here](#)¹.

Interview Format

During the interview, you will review and work on this code in collaboration with your interviewer. You'll be asked to share your screen for this exercise. Please make sure that screen sharing works with Microsoft Teams.

Pre-Interview Setup

To ensure all candidates have the same amount of time for the task during the interview, we ask that you set up the project on your machine prior to the interview. This process might take some time depending on your system, so please complete the following steps **before the interview day**:

1. **Clone the Repository: Clone the repository locally:**

```
git clone https://github.com/gropyus/TaxNow24
```

2. **Run the corresponding parts locally:**

For frontend: <https://github.com/gropyus/TaxNow24/tree/main/frontend>

For backend: <https://github.com/gropyus/TaxNow24/tree/main/backend>

3. **Have Your Preferred IDE Ready:**

Make sure your preferred IDE is installed and operational. While we primarily use [IntelliJ](#)² or [VS Code](#)³, you're welcome to use the IDE with which you're most comfortable.

A Few Tips

Please note that you are **not** required to go through the entire codebase beforehand or understand every part of it. The interview will provide enough time for you to understand the relevant parts together with your interviewer. Our top tip for you is to be prepared, enjoy the process, and view this as an opportunity to show what you know and maybe even learn something new.

We look forward to meeting you during the interview. **Best of luck!**
